hr software and more

How greater shop floor visibility empowers your workforce and drives productivity.

We are Equator HR

With over two decades of experience in helping companies streamline their business software, we're dedicated to helping our clients improve efficiency and drive productivity across the board. A huge part of that is improving visibility, efficiency and transparency on the shop floor. Doing so will enable companies to pro-actively resolve issues, addressing potential bottlenecks before they become a concern and keeping business moving swiftly.

In order to achieve this, businesses need access to real-time information so managers can make real-time decisions. Consumers don't stop when something goes wrong, and neither should your business.

When it comes to capturing real-time data, process and integration are everything. It's one thing to make real-time data available, but integrating that data with existing systems is where the real challenge lies.

That's where we come in

" It offers managers complete business wide visibility. "

We have a suite of modular tools available that are designed to not only gather data, but help businesses turn it into valuable insight. When it comes to shop floor, our Shop Floor Data Collection (SFDC) module offers an unparalleled method of collecting and collating valuable data. It offers managers complete business-wide visibility, particularly when seamlessly integrated with SYSPRO ERP.

It makes everything from tracking sales and stock to staff management a breeze. What's more, the entire process can be fully automated allowing you to track any movement on the shop floor, from staff coming and going to their interactions with customers and number of sales. You can quickly see what resource is available, who is available, when they are available and which jobs or projects to match them too. Not only does this streamline work-flows, it means that the job gets done right first time, on time and within budget.

- All information is collected and collated electronically using bar-code, proximity tags and biometric readers.

- iPhones and Android devices can be used to log operations and track movement of staff.

- Data is automatically organised and presented in a way that's immediately understandable.

- Data collected can be customised, from employee or job number to the quantity of products sold or start and finish time.

- Data can be collected in real-time or at set intervals depending on requirements.

- Can be used as a standalone module or integrated into existing ERPs.
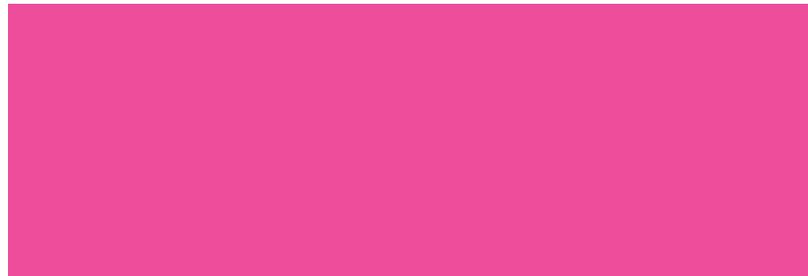

While our Shop Floor Data Collection module can help businesses understand and monitor what's happening on the shop floor, we have a range of other modules designed to help streamline their business in other areas.

Payroll

Payroll administration can be a tedious and complex task if not handled correctly. This dedicated module is designed to removes the headache of payroll, using a simple and flexible approach that can scale with businesses of all sizes. From PAYE to SSP, SMP to SAP our module stays up to date so you don't have to.
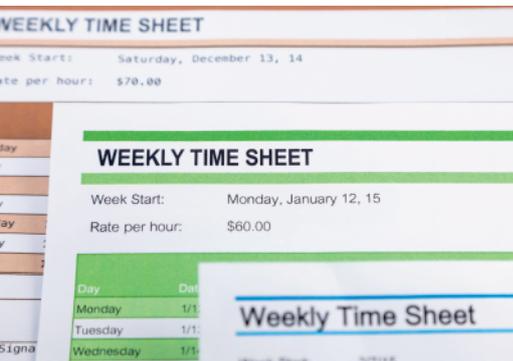

Time & Attendance

The time and attendance module fully automates the clocking in and out of employees using a range of technologies. These range from bluetooth enabled smartphones to proximity magnets and biometric readers.

Access Control

Larger Businesses may find they need to supervise staff closely to ensure they don't stray into restricted areas. Our access control module allows businesses to control and monitor staff movements throughout the premises in real-time, removing any complications.
